

**State Project No. 713-59-0212
Peters Creek Bridge
Washington Parish
(Estimated Construction Cost: \$591,705.40)**

The structure is functionally obsolete and load posted at 5 tons. The roadway receives a considerable amount of traffic per day (300+ VPD). It is used as a connector for parish people traveling to and from LA 10. If replaced, it could benefit the logging community along with the usual vehicular use.

The proposed structure's construction will add additional workers to a contractor's payroll and assist them in meeting equipment loan payments and payroll overhead costs.
